Reviews

*The publication is great and fantastic. It is probably the most remarkable book i actually have read through. Its been printed in an exceedingly easy way and it is merely right after i finished reading through this publication where in fact altered me, modify the way i think.

Book Condition: New. Publisher/Verlag: Springer Netherlands | Properties and Applications | Plastics are part of everyday life and contribute immensely to the benefit of humanity. When failures occur, they are due in part either to inferior properties (resulting from poor design or badly controlled processing), or to an incomplete understanding of the properties and applications of plastics materials. Since publication of the first edition, the plastics industry has increasingly adopted advanced business procedures and automation (such as closed loop control and robotics), to combat the effects of recession, and has moved increasingly towards methods based on sound scientific and technological principles. Plastics have increasingly been used in applications once dominated by the use of metals and ceramics. For instance, in the automotive industry, the modern car now contains a much higher proportion of polymers, including commodity plastics and more specialized materials. In addition, compact discs are being made from new injection-moulding grades of polycarbonate, which meet the requirements of a demanding process. This second edition has been thoroughly revised and extended to include new materials, technologies and design concepts. Chapters on thermoplastics reflect the development of polymer blends and alloys, whilst the chapters devoted to thermosets have been reorganized to accommodate the renaissance in the applications of phenolics and to cover the growing importance of polyurethanes. The related two component process technologies are now included; having undergone major developments in the last decade, they have become important shaping processes. | 1 Introduction.- 1.1 Background.- 1.2 Structure and properties of plastics.- 1.2.1 Mechanical properties.- 1.2.2 Thermal properties.- 1.2.3 Electrical properties.- 1.2.4 Optical properties.- 1.2.5 Melt properties.- 1.2.6 Chemical properties.- 1.3 Additives.- 1.4 Processing of plastics.- 1.4.1 Thermoplastics processing.- 1.4.2 Foams.- 1.4.3 Shaping of cross-linking plastics.- 1.5 Practical methods of processing.- 1.5.1 Thermoplastics processing.- 1.5.2 Processing methods for cross-linking...
